HARISH G

AI Engineer | LLM Agents, RAG & Agentic Platforms | Python
Chennai, India | 6380774451 | harishgopi.ai@gmail.com | linkedin.com/in/harishgopi2001 | harishg-ai.github.io

PROFESSIONAL SUMMARY

AI Engineer with 3+ years building production LLM agent platforms in Python. Core engineer on iLink Digital's multi-tenant BeakAI Studio (LangGraph, RAG, MCP, FastAPI on Azure/Kubernetes) and owner of client AI-agent delivery, from process discovery to agents in production. Cut a production agent's response time ~45% and history loading 32x; built a Teams service-desk agent used by 50,000+ employees.

TECHNICAL SKILLS

Generative & Agentic AI: LLMs, OpenAI / Azure OpenAI, GPT-4, RAG, Embeddings, Vector Databases (PGVector), Tool/Function Calling, MCP, A2A, Prompt Engineering, Agent Memory, LLM Guardrails, Langfuse, Copilot Studio
Languages & Frameworks: Python (AsyncIO), FastAPI, LangChain, LangGraph, LangFlow, SQLAlchemy, Celery, TypeScript
Data & Messaging: PostgreSQL, PgBouncer, Redis, OpenSearch, Kafka, Azure Blob Storage
Cloud & DevOps: Azure, Docker, Kubernetes, Helm, CI/CD (Azure DevOps), Git, Microservices, REST APIs, Pytest
Integrations & Security: MS Teams, M365 / Graph, Entra ID, SharePoint, Power Automate, Freshdesk, OAuth2, JWT, SSO

WORK EXPERIENCE

Software Engineer | iLink Digital, Chennai | *Aug 2023 – Present*

BeakAI Studio - Multi-Tenant, Low-Code AI Agent Platform

- Cut conversation-history load time ~32x (49.5s to 1.5s) by reading LangGraph checkpoints directly from the per-tenant Postgres store instead of recompiling the agent graph and its MCP tools.
- Built RAG over documents, SQL/NoSQL stores and Azure Log Analytics with per-record citations and a "no-data" guard against fabricated answers; made agentic retrieval switchable per source, cutting a production agent's response time ~45% (~40s to ~22s) with no quality loss.
- Shipped Microsoft Teams, Copilot and M365 mail channels with SSO and GPT-4 image understanding; made email-to-ticket agents across 5 tenants self-heal after outages that had left mailboxes offline ~4 days.
- Diagnosed and fixed production incidents in the agent runtime: Redis connection-pool exhaustion that blocked ticket creation, an event-loop bug that let authorization fail open, and dropped MCP connections, with no recurrence since.
- Integrated agents with Azure, ITSM and Azure DevOps via MCP servers; enforced per-agent tool allow-lists at runtime with approval gates and role-based credentials, eliminating crashes from over-exposed toolsets.
- Built the core agent-building APIs (FastAPI, PostgreSQL, Redis) for agents, skills and datasources, plus a skill library, scheduled runs (Celery) and marketplace publishing, now running 10+ production agents across client tenants.
- Built 10+ LLM tools for IT Ops agents in Teams on Microsoft Graph: Entra ID password/MFA reset, user creation, email actions, ticket approvals and patching, with human-in-the-loop approval.
- Built the AI security service APIs (policies, guardrails, validators) and extended PII moderation to tool-call and image messages, closing a gap where moderation was silently skipped.

Cappie - AI Service Desk Agent for Swire Coca-Cola

- Built Cappie in Copilot Studio and Power Automate, integrating Freshdesk to automate ticket creation, notifications and status updates and grounding answers in an auto-synced knowledge base, cutting manual L1 ticket handling by 75% and auto-handling 100+ notifications per month.
- Rolled it out to 50,000+ employees in Microsoft Teams with 50+ automated workflows, including employee campaign distribution and branched, context-aware conversation routing.

Beak - RMM Platform

- Built the Microsoft Intune device-sync service (FastAPI, Kafka) streaming an organisation's full managed-device estate into the RMM platform, with Intune details on device and asset APIs.
- Created the multi-tenant Redis cache service and moved startup caching out of core services, speeding up their startup; added one-time-passcode MFA, tenant-scoped database sessions and CRUD APIs to the core platform.

EDUCATION & CERTIFICATIONS

B.E. Electronics & Communication Engineering: Rajalakshmi Engineering College, 2023
Certifications: Azure Fundamentals (AZ-900); Udemy: Autonomous AI Agents with Python, FastAPI with OAuth & JWT

ACHIEVEMENTS

- Ran 2 hackathons (Chennai, Trichy; 2025–26) where 50+ students built AI security agents on BeakAI Studio; mentored 6 interns and served as intern SPOC and platform SME.
- Awarded Best Team Member in product engineering; led client demos and represented iLink Digital on the campus recruitment team.
